

## ENERGY EFFICIENCY PLAN

The Galeries Lafayette Group's commitment to reducing the impact of its activities on the environment, a true pillar of its Sustainable Development policy, has been structured for nearly 10 years.

As an example, its Go for Good responsible selection, launched in 2018, identifies products with a lower impact on the environment. In addition, significant progress has been made in transportation, with a 45% reduction in CO2 emissions between 2019 and 2022. In terms of buildings, its flagship Haussmann building has reduced its energy consumption by 35% between 2014 and 2019.

The group has put in place a complementary energy sobriety plan in mid-2022:

- Reducing the period during which store windows and illuminated signs are turned on: on 30 minutes before opening, off 30 minutes after closing. In anticipation of the Christmas season, store windows and illuminated signs will be turned off earlier than usual.
- Adjustment of air conditioning and heating set points with a 1°C reduction in the set point
- Renewal of less energy-consuming equipment and switch to LEDs
- Reinforcing best practices at all Group sites (BMS/BMT optimization), detection of sources of energy inefficiency

Additional measures are planned in the event of a Red EcoWatt:

- Maintaining the temperature in stores without air conditioning, heating
- Switching off outdoor lighting
- Reduction of light intensity, when technical installations allow
